BOB-173 closure evidence — 2026-09-23 (staleness-corrected closure)

Finding

This item was ALREADY FIXED in a prior session (commit ca0cbf4, 2026-08-22, “fix(BOB-173): a webhook API that reported success when the write had failed”) — the tracker was simply never synced to reflect it. Discovered while investigating BOB-174 (whose own evidence pack states it was measured “on the already-BOB-173-fixed tree”).

Fix (already landed)

download-proxy/src/api/hooks.py’s `_save_hooks` no longer swallows every exception and returns `None` — it now propagates failure so both call sites (create/delete) can translate a persistence failure into a non-2xx HTTP response rather than silently reporting success.

Independent verification (coordinator, from clean shell, 2026-09-23)

```
$ .venv/bin/python -m pytest tests/unit/api_layer/  
test_bob173_hook_persistence_failure.py -q  
.....  
10 passed, 1 warning in 1.91s
```

Commit ca0cbf4 confirms independent review returned GO with zero blocking and zero important findings at landing time.

Status

Fixed (already landed, tracker sync only). Closed by coordinator.
