BOB-174 closure evidence — 2026-09-23 (staleness-corrected closure)

Finding

This item was ALREADY FIXED in a prior session (commits 5eb2781 + 80a8750, landed by 2026-09-01 per the pre-existing evidence pack's file timestamps) — the tracker was simply never synced to reflect it. Discovered while surveying the open backlog and cross-checking BOB-174's own text against current source.

Fix (already landed)

Full existing evidence at docs/qa/BOB-174/EVIDENCE.md (Revision 2, §11.4.44 header, 378+ lines) + docs/qa/BOB-174/DESIGN_DECISION.md, both with HTML/PDF/DOCX exports already present. Source (download-proxy/src/api/hooks.py) carries explicit in-code citations: - `_load_hooks` raises `HookStoreCorruptError` distinguishing MISSING (empty list, unchanged behaviour) from CORRUPT (explicit error) — closes A1. - `_save_hooks` uses tmp-file + `os.replace` atomic write, reusing `theme_state.py`'s existing `_write_atomic` pattern (§11.4.28) — closes A5. - create/delete refuse rather than destroy on a corrupt store — closes A2. - A3 (VALID_EVENTS/HookEventType drift guard) addressed per commit history.

Independent verification (coordinator, from clean shell, 2026-09-23)

```
$ .venv/bin/python -m pytest tests/unit/api_layer/  
test_bob174_corrupt_hook_store.py -q  
.....  
35 passed, 1 warning in 5.65s
```

The pre-existing evidence pack's own Revision 2 records that an independent review found zero defects in the shipped code (only in the evidence pack's own stale figures, which were corrected in place — a transparency the document itself documents).

Status

Fixed (already landed, tracker sync only). Closed by coordinator.
