BOB-176 closure evidence — 2026-09-23

Fix

`_get_enabled_trackers()` in `download-proxy/src/merge_service/search.py` gated rutracker on `RUTRACKER_USERNAME` and `RUTRACKER_PASSWORD` only, ignoring `RUTRACKER_COOKIES` — even though `_search_rutracker` itself treats cookies as the `PREFERRED` auth path, and the `nnmclub` sibling gate already honours its own cookies variable. Fixed to mirror the `nnmclub` gate's shape exactly:

```
if os.getenv("RUTRACKER_COOKIES") or  
   (os.getenv("RUTRACKER_USERNAME") and  
    os.getenv("RUTRACKER_PASSWORD")):
```

Audit of other trackers (acceptance criterion e)

Investigated kinozal and iptorrents firsthand: neither references any `*_COOKIES` environment variable anywhere in its search-site body (`grep` across `download-proxy/src/` + `scripts/load-tracker-cookies.sh`: zero matches) — both perform an unconditional username/password login with no cookie-bypass branch to be asymmetric against. Their existing username/password-only enablement gates are therefore already consistent with their own search logic. `rutor` is fully public/unauthenticated (no gate); `jackett` gates on an API key, not cookies. **Only rutracker had the described asymmetry** — confirmed, not merely asserted, via a dedicated executable test

(test_kinozal_and_iporrents_have_no_cookies_bypass_to_be_asymmetric_against)
proving even fabricated cookies env vars leave both trackers disabled
without username+password.

Independently re-verified this session (coordinator, including a

genuine paired-mutation revert/restore)

```
$ .venv/bin/python -m pytest tests/unit/merge_service/  
test_bob176_rutracker_cookies_enablement.py -v --import-  
mode=importlib  
... 6 passed in 0.62s
```

```
$ grep -n "RUTRACKER_COOKIES.*or" download-proxy/src/  
merge_service/search.py  
1248: if os.getenv("RUTRACKER_COOKIES") or  
(os.getenv("RUTRACKER_USERNAME") and  
os.getenv("RUTRACKER_PASSWORD")):
```

```
$ git stash push -m "coordinator-verify-bob176" -- download-proxy/  
src/merge_service/search.py  
$ .venv/bin/python -m pytest tests/unit/merge_service/  
test_bob176_rutracker_cookies_enablement.py -v --import-  
mode=importlib  
FAILED test_cookies_only_config_enables_rutracker  
AssertionError: RUTRACKER_COOKIES alone did not enable rutracker  
-- the  
enablement gate is still ignoring cookies even though  
_search_rutracker  
treats them as the preferred auth path and the nmclub sibling  
gate  
already honours its own cookies variable.  
1 failed, 5 passed in 0.61s
```

```
$ git stash pop  
$ .venv/bin/python -m pytest tests/unit/merge_service/  
test_bob176_rutracker_cookies_enablement.py -q --import-  
mode=importlib  
6 passed in 0.63s
```

Genuine reproduction confirmed independently — reverting the
source alone reproduces the exact defect signature; restoring returns
to green. The mandatory negative control (§11.4.201(1)) is proven by a
passing test: test_credential_less_config_disables_rutracker and two

additional regression guards (lone username, lone password, neither with cookies) — rutracker stays disabled in every credential-less/partial-credential shape, the fix is purely additive.

Honest boundary (not silenced, per the subagent's own report)

tests/conftest.py carries an unrelated PROSE comment referencing “BOB-176 root cause” for a completely different, already-closed defect (a sys.modules pollution issue from 2026-09-01) — a casual-comment ID coincidence, not a tracker-DB collision (the actual BOB-176 tracked item is unambiguous); noted for awareness, does not affect this closure.
