

DEAD_PUBLIC_TRACKERS

recovery re-check — 2026-06-16

Revision: 1 Last modified: 2026-06-16T00:00:00Z

Read-only HTTP probe of all 14 DEAD_PUBLIC_TRACKERS (download-proxy/src/merge_service/search.py:482) with the plugin Firefox UA, sequential + gentle, following redirects, grepping bodies for real listing markup vs Cloudflare/JS gates. §11.4.118 discovery; §11.4.6 honest (a live 200 proves reachability, NOT that the plugin parser still extracts fields).

Counts: RECOVERED 4 · GATED 5 · STILL-DEAD 5.

RECOVERED — candidates to re-enable (real torrent markup, no gate)

tracker	URL	evidence
audiobookbay	http://theaudiobookbay.se/	200, real /abss/... rows (audiobook-only niche, live)
bitru	https://bitru.org	200, real details.php?id=... rows
therarbg	https://therarbg.com	200, real /post-detail/<id>/... rows (~139 KB result page)
solidtorrents	301 → bitsearch.eu (via bitsearch.to)	rebrand serves 40 real magnet: links/search — needs base-URL update + parser rewrite (different site)

GATED — Cloudflare/JS, unusable from a urllib plugin (§11.4.112, keep disabled)

bt4g (403 “Just a moment...”), btsow (200 “Loading...” JS shell), extratorrent (403 CF), eztv (root 200 at eztvx.to but search path 403 CF), one337x (403 CF).

STILL-DEAD

ali213 (200 but Chinese single-game portal, no torrent rows), pctorrent (DNS fail), torrentfunk (timeout), xfsb (timeout), yihua (DNS fail).

Re-enabling path (§11.4.122 — OPERATOR-REVIEWED, not done here)

Re-enabling any tracker is a separate operator-reviewed change. A live 200 proves reachability only — each RECOVERED candidate's plugin parser MUST be re-validated against current live markup first (solidtorrents→bitsearch is the clearest case where the domain works but the parser needs a rewrite). Recommended per-candidate: operator selects → TDD (RED scraping the live site → fix parser → GREEN) → drop from DEAD_PUBLIC_TRACKERS in the same reviewed commit. NOT performed autonomously.

Captured 2026-06-16 against the live tracker domains.
