Boba — Feature Status (all components)

Revision: 8 **Last modified:** 2026-08-18T13:33:41Z **Scope:** Every system component, service, infrastructure piece, and client app of the Boba project — one row per REAL unit (endpoint / handler / client method / component control / plugin / subcommand / script), grouped by component. **Authority:** assembled by READ-ONLY repo inventory (codegraph + grep + source reading) on 2026-06-15, expanded to per-unit granularity (§11.4.118 discovery-pressure) on 2026-06-16. Cross-references AGENTS.md, CLAUDE.md, docs/REMAINING_WORK_PLAN.md.

Rev 8 (2026-08-18, BOB-075) — staleness remediation (§11.4.44 / §11.4.86 /

GOVERNANCE_AUDIT_2026-08-08_ROUND2.md

RD2-08): the audit's staleness claim was CONFIRMED, not a false positive — a real content edit landed in ea86ce1 (2026-08-15, the docs_chain-engine row swap in §8d below) WITHOUT the Revision/Last-modified header being bumped, and 60 commits landed between the Rev 7 content commit (646b295, 2026-06-16) and this pass (64705eb, 2026-08-18) that were never reflected at row-granularity. This pass performed a TARGETED refresh (§11.4.6 option B — this document is narrative, “assembled by READ-ONLY repo inventory,” not mechanically derivable from a single source-of-truth table, so a full per-unit re-audit of all 289 pre-existing rows was judged out of the bounded scope of a staleness-fix task and is NOT claimed here): added 3 new rows to §8d for scripts that shipped since Rev 7 and were completely absent from this ledger — scripts/load-tracker-cookies.sh (tracker-cookies autoload, 619a5f6), scripts/boba-svc.sh (sudo-free systemd wrapper, 444d94e), scripts/commit-push-all.sh (§11.4.234 dedicated commit/push endpoint, 08e870e) — each cited to its real source file + covering challenge. Total features cataloged: 289 → **292**. Every pre-

existing row was left untouched (no content was invented to “look fresh”); the honest scope boundary of this pass is recorded under “Components NOT inventoried” below.

Rev 7 (2026-06-16) — live-PASS update for the search/auth fix batch (HEAD 7e9cab5): the multi-word URL-encoding fix (da7d709, ~17 nova3 plugins), the new RUTRACKER_COOKIES injection (2fc29fc), NNMCLUB_COOKIES auth, /auth/status cookie reflection (9c2f8dc), the new GET /api/v1/healthz JSON endpoint (137d7ff), and §11.4.85 stress+chaos coverage for the multi-word fix (7e9cab5) were all PROVEN end-to-end on the live nezha stack — full-fleet the matrix = **2600 results / 23 contributing trackers / zero plugin_bad_query_encoding**, all four private trackers authenticate (rutracker 50, nnmclub 50, kinozal 50, iptorrents 49). Evidence: docs/qa/search-fix-verify-20260616/. kickass.py reclassified **Won’t-fix structurally-impossible (§11.4.112)** per docs/research/kickass_403_20260616/. NOTE (§11.4.6): no Go files were touched this session — the Go rows are unchanged (the pre-existing magnet_stress_chaos_test.go guard stands; no NEW Go query-encoding guard was added this session, so none is claimed here).

Captured-evidence-driven (§11.4.5 / §11.4.45 / §11.4.86). Every feature row cites a real source file (file:line where load-bearing), endpoint, command, or control. **No invented features** (§11.4.6). As of Rev 5 the **Video** column is DEFINITIVE for every row — there is no bare PENDING. Each cell is exactly one of: VIDEO-CONFIRMED – <file> (the feature is shown on-screen in a committed recording), PENDING (UI – film next) (a user-visible control/dialog not yet *individually* filmed), or N/A (no UI – test-covered + exercised by <journey>) (a non-user-visible unit — REST endpoint / handler / client method / parser / scanner / service / crypto / repo / script — which has no screen of its own and is confirmed by its cited tests plus the UI/CLI journey that drives it). **Honest classification (§11.4.6/§11.4.143): a row is VIDEO-CONFIRMED only when a real recording actually shows it.**

Per-row Video tally (291 feature rows — the pre-existing Rev ≤7 tally of 288 vs the stated “289” total was a 1-row pre-existing discrepancy not reconciled by this pass, §11.4.6 honest note; +3 for the Rev 8 §8d additions, all N/A/host-script): **28 VIDEO-CONFIRMED, 14 PENDING (UI — film next), 249 N/A (no UI — test-covered).**

Column legend: - **Impl** = implemented / partial / stub / missing - **Wired** = reachable on a running default-profile stack (yes / no / opt-in / host) - **Tests** = test types present + cite file (unit / integration / e2e / security / stress-chaos /

property / contract); none if no covering test found -
Validation = honest validation posture (tested-green-in-suite / unit-only / live-evidence-captured / not-validated / operator-blocked) - **Video** = DEFINITIVE video-recording status — one of VIDEO-CONFIRMED – <file> / PENDING (UI – film next) / N/A (no UI – test-covered + exercised by <journey>)

Video-recording confirmations (§11.4.143 / §11.4.83)

Real-use recordings (Claude-vision analyzed — the HelixAgent ensemble vision is a proven stub, see docs/qa/recording-readiness-20260615/) in /Volumes/T7/Downloads/Recordings/ (project-prefix boba-). Per-row Video cells stay PENDING where a feature has not been *individually* filmed; the recordings below confirm the headline user-facing flows on-screen.

Honest scope (§11.4.6, no bluff): - Backend services (download-proxy / merge / boba-jackett / Go) verified **200 server-side inside the VM** and exercised through the web UI recordings. - **Console errors** seen in the web recordings are an **SSH-tunnel SSE/poll artifact** (macOS↔VM), NOT product defects — every endpoint is 200 in the VM. See the feature-tour verdict. - **BobaLink extension: VIDEO-CONFIRMED** — the prior --load-extension tooling gap was closed by building extension/scripts/record-features.mjs (loads the built MV3 artifact into a real Chromium, records the scan/popup/options journeys). Plus its passing test suite. - **TUI / mobile / desktop:** do not exist in this project (server-side + Angular web + browser extension only) — nothing to record.

Components NOT inventoried / discrepancies (honest gaps, §11.4.6)

- **Rev 8 scope boundary (BOB-075, 2026-08-18):** this pass added 3 new rows for scripts that shipped with no prior row (§8d) and fixed the missing Rev/date bump for the ea86ce1 content edit, but did **NOT** re-audit the other ~289 pre-existing rows against the current tree — that would be a full re-run of

the original READ-ONLY repo-inventory process (§11.4.118 discovery-pressure), out of scope for a bounded staleness fix. Known-real capabilities that shipped since Rev 7 and are **not yet itemized at row-granularity** here (tracked as an honest gap, not silently assumed covered): the systemd service topology (boba.target, boba-stack.service, boba-webui-bridge.service, 444d94e/bbc63ca), outbound egress-proxy routing for tracker fetches (BOBA_UPSTREAM_PROXY, b44a2e4/4e62eca/be5062d), and the submodules/jackett version bump to v0.24.2406 (99a486e, BOB-076 — a dependency-version change, not a new feature row). A future pass MAY re-run the full inventory; until then this document is accurate for what it explicitly claims and honestly incomplete for what it does not.

- **CORRECTION vs Rev 2:** boba-ctl.sh DOES exist at scripts/boba-ctl.sh (Rev 2 said it did not). Its subcommands are now itemized in §8a. The underlying Go binary is cmd/boba-ctl/main.go (5 subcommands: up/down/status/health/list).
- **CORRECTION vs Rev 2:** the install-plugin.sh PLUGINS curated array has **44 entries**, not 12. ~21 have a matching plugins/*.py file; the rest (incl. torrentproject, torrentscsv) are curated names with no file present in this tree — itemized in §4c, not asserted as working.
- **Prometheus/OpenTelemetry metrics** — tests/observability/test_metrics_exist.py + observability/ dir exist, but no prometheus_client Counter()/Histogram()/Gauge() definitions were found in download-proxy/src; metrics surface is via GET /api/v1/stats (counters maintained in-process), not a /metrics Prometheus endpoint. Stated as fact, not assumed.
- **Go DownloadHandler / ActiveDownloadsHandler** — flagged partial/stub in §2a (mock success / empty array, no qBit integration) per source reading. The Go profile is opt-in and NOT the shipped product.
- **Go scheduler** — CRUD-only, no driver loop (RW-10); schedules never fire. The Go enricher is missing (RW-11).
- **Video-recording confirmation** — PENDING for all rows EXCEPT the boba-ctl CLI subcommands (status/health/list) and the web-UI flows already filmed (POST /api/v1/search journey + dashboard tab/button/theme/Jackett tour). Remaining per-feature flows are an in-progress recording pass (§11.4.107/§11.4.143).
