BOB-165 closure evidence — 2026-09-23

Fix (the item’s own acceptance criterion’s second, documentation-only

branch — “OR CLAUDE.md is corrected to document the supported runner explicitly”)

CLAUDE.md already correctly documents `.venv/bin/python -m pytest .... AGENTS.md` (which §11.4.157 requires stay in lockstep with CLAUDE.md) had drifted: its “Single test / subset” section still documented the BROKEN `python3 -m pytest ...` form. Corrected AGENTS.md’s three example commands to `.venv/bin/python -m pytest`, matching CLAUDE.md, with an in-source comment explaining why (this also restores §11.4.157 lockstep, a second defect the drift itself constituted).

Independently verified this session

```
$ python3 -m pytest tests/unit/test_freeleech.py -v --import-  
mode=importlib  
/usr/bin/python3: No module named pytest
```

(System python3 on THIS host doesn’t even have pytest installed — an even harder failure than the item’s originally-measured stale-ABI-rpds ModuleNotFoundError, but the same conclusion: the documented `python3 -m pytest` command cannot reach collection.)

```
$ .venv/bin/python -m pytest tests/unit/test_freeleech.py -v --  
import-mode=importlib  
...  
13 passed in 1.39s
```

(The corrected, now-consistently-documented command works.)

```
$ grep -n "python3 -m pytest" AGENTS.md
271:# system python3 -m pytest cannot even reach
collection. .venv/bin/python is
```

Only remaining occurrence is inside the explanatory comment itself — no live command in AGENTS.md still documents the broken form.

Honest boundary (not silenced, per the item's own framing)

This does NOT touch the host's `~/local/lib/python3/site-packages/rpds/` `install` (a system-level, out-of-repo mutation this session deliberately did not perform) nor the separate BOB-154 `venv-rebuild-to-3.12` item. Both remain open, unrelated follow-ups. This closure satisfies BOB-165's acceptance criterion via its explicitly-permitted second branch: the documented command and the working command now agree.
