Boba — Feature Status (all components)

Revision: 3 **Last modified:** 2026-06-16T11:30:00Z **Scope:** Every system component, service, infrastructure piece, and client app of the Boba project — one row per REAL unit (endpoint / handler / client method / component control / plugin / subcommand / script), grouped by component. **Authority:** assembled by READ-ONLY repo inventory (codegraph + grep + source reading) on 2026-06-15, expanded to per-unit granularity (§11.4.118 discovery-pressure) on 2026-06-16. Cross-references AGENTS.md, CLAUDE.md, docs/REMAINING_WORK_PLAN.md.

Captured-evidence-driven (§11.4.5 / §11.4.45 / §11.4.86). Every feature row cites a real source file (file:line where load-bearing), endpoint, command, or control. **No invented features** (§11.4.6). The **Video-recording confirmation** column is PENDING for all rows EXCEPT the rows already marked VIDEO-CONFIRMED (boba-ctl CLI orchestrator + the POST /api/v1/search web journey); remaining surfaces (per-feature flows) are an in-progress recording pass (§11.4.107/§11.4.143).

Column legend: - **Impl** = implemented / partial / stub / missing - **Wired** = reachable on a running default-profile stack (yes / no / opt-in / host) - **Tests** = test types present + cite file (unit / integration / e2e / security / stress-chaos / property / contract); none if no covering test found - **Validation** = honest validation posture (tested-green-in-suite / unit-only / live-evidence-captured / not-validated / operator-blocked) - **Video** = video-recording confirmation — PENDING unless an individual recording exists

Video-recording confirmations (§11.4.143 / §11.4.83)

Real-use recordings (Claude-vision analyzed — the HelixAgent ensemble vision is a proven stub, see docs/qa/recording-readiness-20260615/) in /Volumes/T7/Downloads/Recordings/ (project-prefix boba-). Per-row Video cells stay PENDING where a feature has not been *individually* filmed; the recordings below confirm the headline user-facing flows on-screen.

Recording	Surface	Features confirmed	Verdict
boba-cli-orchestrator-demo.mp4	CLI (boba-ctl)	status / health / list — 4 services running & healthy	docs/qa/recordings-20260615/boba-cli-verdict.md
boba-web-search-flow.mp4	Web dashboard	launch → search “debian” → live results → “829 results (288 merged)” complete	boba-web-search-flow-verdict.md
boba-web-feature-tour.mp4 + boba-web-dashboard-tour.mp4	Web dashboard	dashboard load (29 trackers, qBit connected), result rows render qBit + Download buttons (clickable), tab nav (Results/Active Downloads/Trackers/Schedules/Hooks), Jackett /jackett credentials page, theme	boba-web-feature-tour-verdict.md

Honest scope (§11.4.6, no bluff): - **Backend services** (download-proxy / merge / boba-jackett / Go) verified **200 server-side inside the VM** and exercised through the web UI recordings. - **Console errors** seen in the web recordings are an **SSH-tunnel SSE/poll artifact** (macOS[?]VM), NOT product defects — every endpoint is 200 in the VM. See the feature-tour verdict. - **BobaLink extension**: covered by passing test suite (per docs/browser_extension/Status.md); a real-use UI video needs a --load-extension browser the current MCP can’t launch — documented tooling-limited follow-up (NOT faked). - **TUI / mobile / desktop**: do not exist in this project (server-side + Angular web + browser extension only) — nothing to record.

Plugin contract: class with url, name, supported_categories, search(), download_torrent(). Installed into container by install-plugin.sh. nova2, novaprinter, socks, helpers, env_loader, theme_injector, download_proxy). Many curated names have NO matching file in this repo tree (the install script fetches/expects them elsewhere) — flagged honestly below.

BOBA_MASTER_KEY auto-generation (first-boot) for encrypted boba.db	implemented	yes	go bootstrap/bootstrap_test.go	unit (go)

Components NOT inventoried / discrepancies (honest gaps, §11.4.6)

- **CORRECTION vs Rev 2:** boba-ctl.sh DOES exist at scripts/boba-ctl.sh (Rev 2 said it did not). Its subcommands are now itemized in §8a. The underlying Go binary is cmd/boba-ctl/main.go (5 subcommands: up/down/status/health/list).
- **CORRECTION vs Rev 2:** the install-plugin.sh PLUGINS curated array has **44 entries**, not 12. ~21 have a matching plugins/*.py file; the rest (incl. torrentproject, torrentscsv) are curated names with no file present in this tree — itemized in §4c, not asserted as working.
- **Prometheus/OpenTelemetry metrics** — tests/observability/test_metrics_exist.py + observability/ dir exist, but no prometheus_client Counter()/Histogram()/Gauge() definitions were found in download-proxy/src; metrics surface is via GET /api/v1/stats (counters maintained in-process), not a /metrics Prometheus endpoint. Stated as fact, not assumed.
- **Go DownloadHandler / ActiveDownloadsHandler** — flagged partial/stub in §2a (mock success / empty array, no qBit integration) per source reading. The Go profile is opt-in and NOT the shipped product.
- **Go scheduler** — CRUD-only, no driver loop (RW-10); schedules never fire. The Go enricher is missing (RW-11).
- **Video-recording confirmation** — PENDING for all rows EXCEPT the boba-ctl CLI subcommands (status/health/list) and the web-UI flows already filmed (POST /api/v1/search journey + dashboard tab/button/theme/Jackett tour). Remaining per-feature flows are an in-progress recording pass (§11.4.107/§11.4.143).
