

Architecture_Summary

Architecture Summary

System topology, data flow, and lifecycle diagrams for the Boba project.

Contents

- `container-topology.mmd` — Two-container + one host-process topology (qBittorrent + Jackett proxy/merge-service, host webui-bridge)
- `plugin-execution.mmd` — Nova3 plugin execution: subprocess (public trackers) vs aiohttp (private trackers)
- `private-tracker-bridge.mmd` — Authenticated download path via webui-bridge.py on :7188
- `request-lifecycle.mmd` — Full user-visible flow: search query → merge → stream → download
- `search-lifecycle.mmd` — Detailed search: Angular → FastAPI → SearchOrchestrator → subprocess/aiohttp
- `shutdown-sequence.mmd` — Graceful shutdown: SIGTERM/SIGINT → signal handler → uvicorn → SearchOrchestrator

Status

- Domain: Architecture
- Docs count: 6 (Mermaid diagrams)
- Format: Mermaid .mmd (rendered in Markdown viewers with Mermaid support)
- Last reviewed: 2026-06-08

Diagram Overview

Diagram	Scope
container-topology	Physical deployment: containers, ports, host processes
plugin-execution	Public vs private tracker execution model
private-tracker-bridge	Authenticated download proxy for private sites
request-lifecycle	End-to-end user request path

Diagram	Scope
search-lifecycle	Internal fan-out, dedup, enrichment, streaming
shutdown-sequence	Graceful shutdown and resource cleanup
